DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-48, drawn to a diagnostic assay for disease characterized by abnormal methylation of cytosine at a site within the glutathione-S-transferase (GST) Pigene.

Group II, claim(s) 49-50, drawn to nucleic acid probes and primers for the GST Pi gene.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons.

The special technical feature of the method of Claim 1 appears to be drawn to the GST Pi gene. The GST Pi gene is not a contribution over the prior art. The specification indicates that the GST-Pi gene sequence is Genbank Accession No. M24485 (December 1994)(page 12, lines 15-20).

The method of Claim 1 does not appear to be a contribution over the prior art (Lee, Cancer Epidemiology, Biomarkers and Prevention, Vol. 6, pages 443-450, June 1997). Lee teaches CG island methylation changes near the GSTP1 gene in prostatic carcinoma cells detected using PCR. As seen on pages 443, col 2, DNA was isolated, the DNA was amplified using PCR primers of set A and PCR products were electrophoresed to determine the presence. The amplifying step targeted a region within the GST-PI gene and its regulatory

flanking sequences (Figure 1). Thus, the method does not appear to be a contribution over the prior art. Similarly, Jhaveri (Gene, Vol. 210, pages 1-7, 1998) appears to teach a method which involves amplification of CpG islands within the CSTP1 gene.

The method claims do not require the specific probes and primers of Claims 49-50. The probes and primers are broadly claimed to encompass the full length gene. Therefore, the probes and primers are not a contribution over the prior art.

- 3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Jeanine Goldberg whose telephone number is (703) 306-5817. The examiner can normally be reached Monday-Friday from 8:00 a.m. to 5:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (703) 308-1152. The fax number for this Group is (703) 305-3014.

Any inquiry of a general nature should be directed to the Group receptionist whose telephone number is (703) 308-0196.
